Petstagram
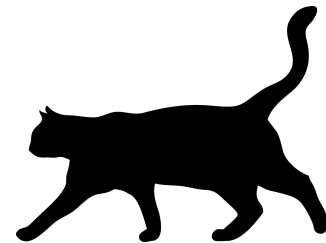

CS375 FINAL PROJECT BY HANGYU LI, RYAN GAN & TEME OKOTETE

What is Petstagram?

In this increasingly developed country, as people's lives are getting better and better, having pets in their home has become a popular hobby. We have specially designed a web application for people who love pets and animals. This is free web application; users can share any photo and text about their pets to other pet/animal lovers. The purpose of this application is to create a virtual community for pets/animal lovers
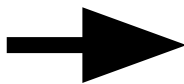

Tools

Before

A list of the technologies we would be using is as stated:

- HTML
- Styling(CSS)
- Javascript
- JSON
- AJAX
- Node.js
- MYSQL

After

A list of the technologies we actually used is as stated:

- HTML
- Styling(CSS)
- Javascript
- JSON
- Node.js
- MYSQL
- Google Custom Search

Expectation VS Reality

Changes made to design

- Logo was moved to the favicon
- Background Image added

Expectation VS Reality

Changes made to design

- Little changes in layout
- Background Image added

Expectation VS Reality

Changes made to design

- Background Image added
- Links to pet stores instead of recommended items

Challenges

Challenges we faced while face include:

- Complexity of Database
- Make a post with image because the Chrome browser does not accept local image
- Navigation between view engine in ejs

Demo
